

The Latest on Jaxie July, 2021

Jax has been with GRRoM since September, 2020. At that time he was suffering from serious skin problems, but medication and a good diet has greatly improved his condition and he has been busy growing a beautiful golden coat! Jax was also diagnosed with a progressive retinal atrophy which will cause eventual blindness. Eye

supplements help slow the progression. In addition, he is taking drops for pigmentary uveitis and is being treated by a vision specialist. A few months ago he began having seizures which are being managed with medication. Despite these issues, Jaxie is a relaxed, happy 10 year old boy, has adapted to his foster home and loves attention and chewing up toys. He is also working with a behaviorist to address his fear and reactionary behavior with other dogs. Despite all his challenges, he is a happy boy and a joy to have around!
