

Rosie Update

April, 2021

At 3 ½, Rosie is a fun-loving, energetic golden who wrestles with her siblings and is thriving today thanks to GRRoM. When Rosie was surrendered to GRRoM, she had multiple health issues, the most serious being a liver shunt. The shunt was allowing toxins to build up in her blood, causing Rosie to be extremely lethargic, under-weight and in danger of having seizures. She had surgery to repair the shunt, but unfortunately, the procedure was not successful and her body developed multiple smaller shunts.

Rosie is thriving today because of the ongoing, extensive medical care she receives. Frequent blood work is required to monitor her blood levels and she is on multiple medications and supplements to support her liver condition. In addition, Rosie has a chronic eye condition that requires ongoing care.

While Rosie's family pays for expensive prescription food, maintenance drugs and her general care, GRRoM continues to pay for Rosie's chronic medical conditions and the cost is high. Donations or sponsorship for Rosie's ongoing care would be deeply appreciated.
